

How to Light the Escea Wood Fire - A Step-by-Step Guide

When lighting Escea's Direct Vent range of fireplaces, the top-down method is the most efficient way to get the most out of your new wood fire. This method is a 'set and forget' way to light the fires without needing constant attention and adjustment. It also ensures the fire smokes less, with a more efficient burn – ultimately giving you a warmer, healthier home.

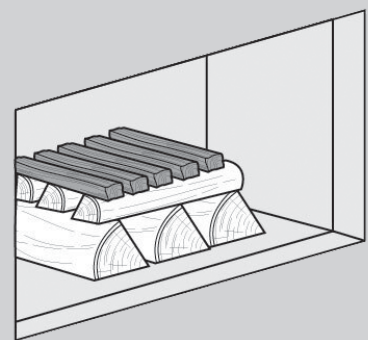

Step 1

Place several large dry logs on the bottom of your fireplace.

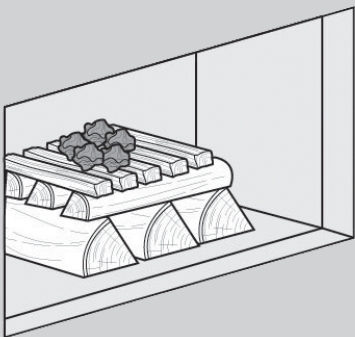

Step 2

Place several smaller dry logs of wood on top of the large logs, alternating the direction of the logs as shown.

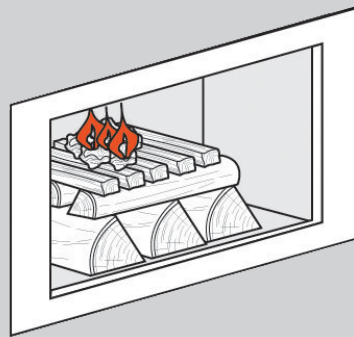

Step 3

Add a layer of dry kindling, again alternating the direction of the kindling.

Step 4

Add newspaper, firelighters, or preferred fire starter on top of the kindling and light.

Step 5

Once ignited, close the fireplace door. You should now be able to leave the fireplace without opening the door for at least 30 minutes while the fire travels down the wood stack.
